Oil exploration to the energy transition, construction to archaeology - a career in Applied Micropalaeontology

Emma Sheldon

(Geological Survey of Denmark and Greenland)

Applied biostratigraphy has been extensively used in the hydrocarbon industry for decades. Skills and competences gained in the oil and gas industry can be readily applied to other industries, including the 'Energy Transition' (e.g. CCUS, geothermal energy and wind farm energy sectors). This talk includes an insight into life on an oil rig and the use of biostratigraphy in a variety of applications
