Dissertation topic: **The effects of agricultural practices on soil fauna**

Brief description of the dissertation: The aim of the project is to verify the efficiency of various agro-environmental measures such as flower strips, field margins, fallows and others on soil fauna. Samples will be collected at locations, using soil samples, pitfall traps, and yellow pan traps. The materials will be sorted into higher groups. Then, classification and determination of individual fauna groups. Data will be summarized and statistically evaluated in general linear models and multidimensional statistics to find differences between samples with or without the impact of agricultural activities.

Date of commencement of studies: **2/10/2024**
