

Motivated students wanted for a new grant project!

SECONDARY METABOLITES OF COMMENSAL STREPTOMYCETES WITH A FOCUS TO ANTIFUNGALS

THE TOPIC? Highly demanded in human medicine, a critical target of WHO

- Underexplored, even though we know that substances produced by symbiotic actinobacteria are widely involved in host protection.
- Accession to a unique collection of host-associated strains

WHO? Pre-graduate and PhD students of biology, chemistry and similar

WHY WITH US?

- An open-minded team bridging multiple subjects – microbiology, genetic engineering, clinical human medicine, pharmacology, analytical chemistry, bioinformatics and ecology
- Option for a granted work contract
