

ÚSTAV GEOLOGIE A PALEONTOLOGIE PŘÍRODOVĚDECKÉ FAKULTY UNIVERZITY KARLOVY

zve všechny zájemce na kombinovaný paleontologicko-sedimentární seminář (MG421S35A a MG422S42A),
který se koná

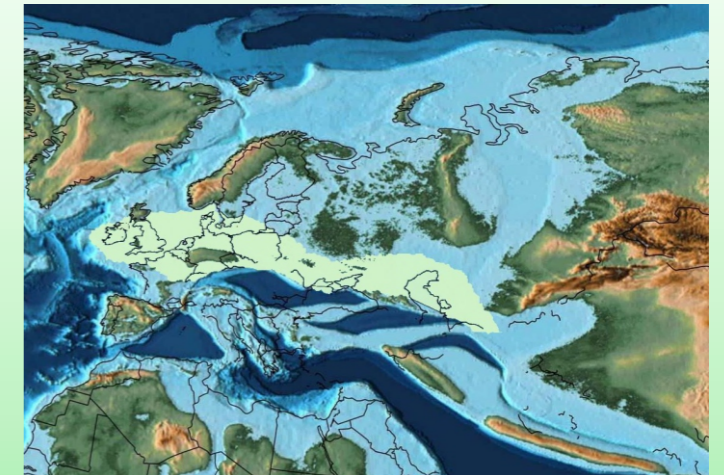

ve středu **26. října 2022** od **14:50** ve **Velké paleontologické posluchárně**

Reconstructing the Cretaceous Greenhouse

Prof. Andy S. Gale
University of Portsmouth, United Kingdom

The Cretaceous system is characterized by numerous events of global importance, including extinctions, oceanic anoxic events and especially by the extreme Greenhouse. These phenomena are accompanied by the shift and re-organizing biogeographical units, biotic changes and high temperatures in polar areas. The reconstructing the Cretaceous (super)Greenhouse is based on integrated data including palaeobiological, geochemical, palaeogeographical and sedimentological investigations.
